About This Report

This Power BI report was developed to give decision-makers a single, unified view of the Global Electronics Retailer's business. It covers six analytical dimensions — sales summary, sales details, basket behaviour, product performance, customer demographics, and store operations — all built on a star schema with Fact_Sales at its centre. The navigation panel on the left lets users filter by year and reset all slicers instantly, making it easy to compare performance across time periods.

Sales Summary

KPIs, geographic sales map & year-over-year comparisons

What This Page Shows

The Sales Summary provides an at-a-glance health check of the entire business. The four KPI cards at the top — Orders, Sales, Cost, and Profit — update dynamically with any year filter. The gauge shows that only 21% of orders have been delivered so far in the selected period, flagging a potential fulfilment concern. The year-over-year comparison panels reveal that 2021 sales of \$1.0M are tracking 88.82% below the prior year goal of \$9.3M, likely due to the dataset being a partial year. The choropleth map makes it immediately clear that the United States (\$23.76M) is the dominant market, followed by Canada (\$3.61M) and the United Kingdom (\$5.75M).

Key Highlights

- 26K Orders
- \$56M Sales
- \$23M Cost
- \$33M Profit
- 21% Delivered

What This Page Shows

Sales Details drills into time-based performance. The grouped bar chart on the right confirms 2019 as the peak revenue year at \$18.3M, with a consistent profit-to-sales ratio maintained across all years until a sharp decline in 2020-2021. The monthly orders chart reveals clear seasonality: February spikes to 3.5K orders and \$7.8M in sales — likely driven by post-holiday promotions — while April dips to the lowest point (0.3K orders, \$0.6M). December recovers strongly at 3.6K orders and \$7.5M. The waterfall chart on the bottom right quantifies year-to-year profit changes, showing a \$3.2M gain into 2019 followed by a \$5.3M drop in 2020, giving leadership a clear signal of where profitability eroded.

Key Highlights

- Avg. Gross Margin/Unit: \$164
- Avg. Profit Margin: 54.6%
- Peak Year: 2019 (\$18.3M)

What This Page Shows

The Basket Influencers page combines market basket analysis with Power BI's built-in AI visuals. The product pairs table at the top surfaces items customers buy together most frequently — the A. Datum Advanced Digital Camera M300 Azure appears alongside multiple Adventure Works devices, which is valuable for cross-sell and bundling strategies. The Key Influencers visual (powered by Power BI's AI engine) identifies that sales are most likely to decrease when the store type is Mega Store, with an average reduction of \$18.57K compared to other store types. The bubble chart on the right shows that single-product baskets account for the most orders, but multi-product baskets (3-4 items) drive significantly higher order values.

Key Highlights

- Avg. Basket: \$2,118
- High Basket Orders: 8,375 (32%)
- Top Pair: A. Datum Camera + Adventure Works TV

Executive Summary

Consolidated insights across all dashboard pages

Sales Performance

- Peak year was 2019 with \$18.3M in revenue
- February drives highest monthly orders (3.5K)
- December closes strong at \$7.5M
- YTY profit declined sharply post-2019
- US leads all countries with \$23.76M
